Acknowledgements

Many people have influenced me personally and academically over the years that culminate in this thesis. This thesis is as much an attribute to them and their excellence as it is an example of my academic achievement. They have spent countless hours passing the torch of knowledge on to me and the rest of those blessed enough to be graced by their presence.

The first of those I would like to recognize is a man who has the truest love for the discipline of mathematics; but whose biggest source of love, pride, and meaning in life stems from the effect he has upon the lives of those around him—especially his students. For from him, the spark of idea comes and embodies itself in the form of this thesis. Thank you Dr. McCoun. I would also like to thank his computer science counterpart Mr. Brozovic whose optimism taught me the key concepts that are used extensively throughout this thesis. As well as the latter, I would like to thank fellow committee members Dr. Thornburg and Dr. Rittenhose; each of who have taken the extra time and workload of a directed study to help me navigate my unique journey through college. I wish to give coaches Bill Libby and Barbara Crousen special thanks for believing in me, and in the process of doing so, helping me believe in myself. Recognition must also be given to those who laid the important groundwork to my collegiate life: to Mrs. Aldridge, I thank you for teaching me how to handle heavy workloads; to Mrs. Fuller, I will be forever gracious for introducing me to the world of computer science; and finally, to “The Cowser,” my high school Calculus teacher, I thank for challenging me to succeed.

I also wish to thank my family and extended family, for without them I would not have had the support, which I needed to be the great person that I am today. Along with
my family, I would like a group of guys who are as much family to me as anyone… the cross country team… especially Daniel Mathis, Lewis Jones, Zach Johnson. Jacob Heidenreich and Bobby Diehl deserve great appreciation for going above and beyond that call of just being a friend by always being there when I needed them. I also want to thank the additional support that I received from my “adopted” sisters Bethany Lukenhoff and Lindzi Brown. I want to give special thanks to Cindy Reading for being my second mom. The final two people I mention deserve much credit for guiding me through life and making me the man I am today. My dad has always looked out for my future and for being someone who I can talk to about all the computer stuff that I have learned in college. Thank you Dad. To my mom, the lady who has always been there… even when I did not want her to be there, I credit for ingraining in me the ways of logic which have become an intricate part of who I am and who I will be. I only hope to one day surpass her. Thank you mom, for everything.

Thanks again to everyone who made this thesis and me possible.

Sincerely,

Jeremy B. Brown
