Instructions on Setting up Dial-up in Windows 2000

These are instructions on how to set up your personal machine at home so you can get access to the Internet via Arrownet. Dispelling any rumors you may have heard this connection is only Internet. **You will not be able to access any of the programs located in your office or in the computer labs nor will you have access to your “h:” drive.**

To do this, you need a modem (that is installed and functional), and have dial-up networking installed on your machine. It would not be a bad idea to have your Windows 2000 disk handy.

- Double Click **My Computer**
- Double Click **Network and Dial up Connection**
- Double Click **Make New Connection**

Click **Next**
Click Dial-up to private network
Click Next

Type 793-6900 in the Phone Number box
Click Next
Click **Next**

**Network Connection Wizard**

**Connection Availability**
You may make the new connection available to all users, or just yourself.

- For all users
- Only for myself

Click **Finish**

**Network Connection Wizard**

Completing the Network Connection Wizard

Type the name you want to use for this connection.

For connection, click **Finish**.

To edit this connection in the Network and Dial-up Connections folder, select it, click **File**, and then click **Properties**.

Add a shortcut to my desktop
Type in your user name and your password
Click Dial

*(Your password is the same one you use to login to mail.mcm.edu)*
